

NAVEEN BHAIRI

Frontend React.js Developer

📞 9398421298

✉ naveen.bhairi123@gmail.com

📍 Hyderabad, India

PROFILE SUMMARY

Frontend React.js Developer with hands-on experience building scalable enterprise web applications using React.js, Redux Toolkit, TypeScript and real-time technologies. Skilled in developing real-time features, reusable UI components, state management and API integration with a strong focus on performance optimization. Experienced in building responsive dashboards and real-time collaboration modules using modern frontend technologies, with exposure to GCP services and working in Agile environments.

EDUCATION

MVGR | 2017-2021

B.Tech - 8.1 GPA

A.P.R.J.C | 2015-2017

Science - 9.8 GPA

WORK EXPERIENCE

COGNIZANT | Oct 2021 - March 2026

React.js Frontend developer - AlgoForge Trading | Jan 2024 - Mar 2026

- Contributed to developing a trading platform using React.js and Redux Toolkit with TypeScript interfaces, implementing reusable UI components to handle complex real-time data flows.
- Implemented server state management using TanStack Query with automatic caching, background refetching, reducing unnecessary API calls and improving data synchronization.
- Developed real-time market dashboards using Socket.IO and Redux Toolkit for live stock and crypto price streaming.
- Built custom React hooks to abstract reusable logic including API calls, WebSocket connections and form state management, improving code reusability across multiple components.
- Integrated TradingView Lightweight Charts for advanced financial visualization including candlestick charts and live trade signal overlays.
- Created analytics dashboards using Recharts to display backtesting metrics, equity curves, drawdown analysis and trade history.
- Implemented secure frontend authentication workflows including JWT session handling, Google OAuth integration, protected routes and 2FA UI screens.
- Integrated REST APIs using Axios with centralized service layers, request interceptors for JWT token attachment and error handling across multiple data-driven modules.
- Contributed to building an error handling system using Axios interceptors, React Error Boundaries and toast notifications managing API failures, network errors and unexpected runtime errors consistently.
- Assisted in developing a strategy marketplace with advanced search and filtering with virtualized rendering using React Window.
- Worked with the team on writing unit and integration tests using Jest and React Testing Library.
- Improved frontend performance through code splitting, lazy loading, React.memo, useMemo and useCallback optimizations, reducing initial bundle size by 60% and improving Lighthouse score from 54 to 91.
- Optimized dashboard responsiveness for 5K+ concurrent real-time events by implementing selective WebSocket subscriptions, frontend virtualization and rendering performance enhancements.

React.js Frontend developer - Healthcare Management System | July 2022 - Dec 2023

- Contributed to building a hospital management platform using React.js, Redux Toolkit and WebSocket supporting multiple clinical workflows with role-based access control.
- Implemented protected routing and session-based authentication using React Router and JWT for role-based clinical access.
- Managed WebSocket event listener registration and cleanup using useEffect preventing memory leaks and duplicate event bindings across clinical components.
- Implemented React Context API to manage global socket connection and authentication state across clinical modules eliminating prop drilling.
- Implemented conditional rendering across clinical dashboards to dynamically display patient status, appointment availability and role-specific UI elements.
- Built custom React hooks for socket event handling, permission checking and patient data fetching improving code reusability.
- Built a reusable UI component library using React.js and Tailwind CSS reducing redundant code by 30% and improving development speed across multiple hospital modules.
- Implemented form handling and validation using React Hook Form with Zod schema validation for patient registration and appointment bookings.
- Implemented route-level code splitting using React.lazy and Suspense across hospital modules reducing initial bundle size and improving load time.
- Implemented skeleton loading screens across patient dashboard and appointment modules using reusable skeleton components improving perceived performance during data fetching.

Cybersecurity Analyst - Google Web Store | Oct 2021 - July 2022

- Managed the complete lifecycle of threat response, handling both initial L1 incident triage and complex L0 escalations while ensuring strict adherence to SLAs.
- Leveraged Chrome DevTools and HTTP Toolkit to perform deep-dive technical investigations into malicious browser extensions.
- Reverse-engineered heavily obfuscated code payloads as part of L0 escalations to conduct thorough root-cause investigations of sophisticated threats.

SKILLS

Frontend

- JavaScript, React.js, TypeScript,
- Redux Toolkit, React Hook Form, Zod, React Query,
- Recharts, React Window, , React Router, Socket.IO,
- Axios, Tailwind CSS and TradingView Lightweight Charts

API & Backend

- Node.js, Express.js, MongoDB,
- Restful APIs, JWT and Google OAuth 2.0

Tools & Others

- Git, GitHub, Postman, Vs Code, Jest, React Testing Library,
- Google Cloud Platform(GCP), Agile/Scrum,
- Burp Suite, Chrome DevTools and HTTP Toolkit
